

SPEED

Hand-built Quality

To push the speed envelope you need maximum control, full concentration, and a board that doesn't distract you from finding your line. That's why the Carbon Art Speed board is designed to trim like a plane on autopilot, leaving the rider to focus on the wind and chop ahead.

Absolute Construction Adherence

Each individual board is thoroughly inspected and measured at eight critical stages of the production process to ensure it is produced to our exact specifications.

Tight Tolerances on Critical Dimensions

Carbon Art production system allows for linear tolerances of +/- 1mm, rocker tolerances of +/- 0.5mm vertical, weight of +/- 3% (versus the industry norm of 5%).

Strength

Designed with a full 6mm lap joint between the bottom sandwich and the deck sandwich, as opposed to the butt joint which is the industry norm.

Laminating Technology

Unique, in-house, pre-preg and vacuum laminating technology. This results in minimum resin weight with maximum matrix strength.

Designed and tested by Chris Lockwood in Western Australia, and proven at world-class speed venues. With unrivalled versatility, the boards excel in the rolling chop found in real-world conditions and deliver uncompromising performance in record-breaking conditions.

Cutting edge materials

Only the best materials and components are used to produce Carbon Art boards. Gore-Tex™ vent plugs for all our boards to keep them safe from heat and pressure.

Graphic options

- Unique "design your board" system
- 5 board colours
- 15 graphics
- 80 combinations

Construction options

- Standard performance build
- Pro build: higher carbon content
increased efficiency
lightweight friction free paint system
polished bottom

Your needs **Our design**

- Unlimited speed** Computer designed for optimum smoothness of all lines. Rocker, outline and vee designed together to optimise the working trim angles, and minimise rail wetting up front.
- Maximum control** Tapered Parallel outline maintains a smooth ride through chop when combined with flatter overall rocker, providing a stable platform that doesn't bounce around. Thinned back foot area keeps you close to the fin, giving you direct control and reducing back leg movement in chop.
- Versatile ease** Unique Carbon Art features save energy so you spend more time going fast and less time backing off for control.

"Insane acceleration and ultimate freeness with control; for incredible speed and pure, sustained adrenaline..."

Chris Lockwood

Board Length Volume Weight Fin Sail range

Board	Length	Volume	Weight	Fin	Sail range
40	235	60	4.5	22	3.5 – 5.5
44	238	65	4.7	24	4.0 – 6.0
47	240	75	4.9	26	4.2 – 6.5
50	243	83	5.5	28	4.6 – 6.8
53	240	86	5.6	30	5.5 – 8.0
